

## RESEARCH REPORT

To make the research of One Goal Project as up-to-date and as close to the truth as possible the partners used both qualitative and quantitative methods. Collecting studies and papers will not be enough. Therefore, the project partners collected a certain amount of completed surveys from both men and women working in the field and conduct a few interviews.

### CHARACTERISTICS OF THE SAMPLE

Each partner administered a questionnaire consisting of closed questions to subjects working in the world of football. The sample included men and women who cover different roles in the world of football: coaches, medical staff, physiotherapists, referees etc. Each partner also conducted two interviews with two football coaches (a woman and a man). From the interviews we get a wider range of stories concerning coaching and the place of females within.
